Azure DevOps Engineer

Location: Warsaw, Poland

Role Purpose:

We are looking for an Azure DevOps Engineer (with PowerShell skills) who loves to automate everything and isn't afraid of challenging problems. We know that this job requires constant learning, so we care more about your attitude and your desire to learn than your current skills exactly matching our requirements. If you have the necessary background and the right mindset we would love to meet with you.

Your main goal in this position will be automating infrastructure provisioning and configuration change in a reliable and predictable way as well as automating application deployment..

Scope of Responsibilities:

- You will be responsible for designing, building and configuring automation infrastructure/configuration and processes enabling the software teams to code and deploy efficiently
- Speed up the CI/CD tool set by improving our internal deployment tooling. Build a ecosystem that combines efficient test automation, deployment, and monitoring.
- Continuous improvement of branching strategies to enable frictionless merging and deployments from testing to production environments.
- Design, setup and maintain a reliable platform monitoring including logs, alerts, metrics etc.
- Manage the availability and scalability of our services.
- Have joint responsibility for the 24/7/365 operations of a SaaS platform and be significantly involved in the infrastructure, architecture and choice of development tools and technologies used.

Skills & Experience required:

- You have 2+ years of professional experience provisioning and operating Azure infrastructure using any automation solution.
- You know PowerShell enough to make it do whatever you need.
- You have a problem-solving attitude.
- You have analytical thinking skills.
- You take initiative.
- You are a team player.
- A good communicator - You will work with internal and external customers, so communication is important (Polish and English, written and spoken).
- We highly appreciate if:
- You have good knowledge of App servers configuration, management and administration;
- You have DevOps experience within C#, .NET core, Next.js environments
- You have experience with designing and implementing a deployment pipeline
- You have experience with Source Control, CI/CD and Configuration Management tools – it will be cool if it's TFS/Azure DevOps
- You have experience with Cloud services: Azure, other cloud providers will be a big plus
- You have some experience in operating relational and NoSQL databases will be a plus
- You have some experience in implementing a full monitoring environment
- You have some experience with API Management tools
- You have good knowledge of testing automation: Selenium
-
  .

Offer:

- challenge, opportunities to exchange skills within multinational team
- ability to work in an autonomous way and in an environment where your ideas are valued
- interesting trainings
- health care
- Multisport card
- French classes
- flexi-time and home-office
- competitive salary aligned with experience
- casual and very friendly environment
- possibility to work in other Client location
