Pricing Architect

Location: Krakow, Poland

Role Purpose:

Working as the Pricing Architect, you will be responsible for all architectural designs in the Pricing Systems. Work streams will include both business initiatives and technology modernization requirements. You will be working on strategic initiatives to modernize our existing technology stack based on a distributed, scalable, service-based architecture. You will be expected to understand business requirements and goals in order to translate them into technical specifications as well as lead the design effort on a variety of projects in a highly collaborative, dynamic environment.

Scope of Responsibilities:

- Participate in Pricing strategic planning.
- Work closely with the Head of Pricing on defining project scope for upcoming sprints.
- Work with the Pricing Team Lead on sprint planning and estimates.
- Work closely with Enterprise Architects to make sure that company-wide guidelines regarding tools & practices are implemented in the project.
- Work closely with Quality Assurance to design feature test plans (integration / service / e2e).
- Liaise with other teams' representatives when integration work is required.
- Conduct R&D where required, including prototypes to validate designs.
- Develop code where designs are complex and harder to describe in a specification.
- Collaborate with team members to determine best practices and requirements for software
- Understand individual business requirements in order to design, develop and test effective solutions.
- Understand in detail the business operational process both before and after the impact of any software changes.
- Understand and document hardware, network and infrastructure requirements of software changes.
- Ensure software releases support continuous build and automated deployment practices.
- Provide prompt and knowledgeable assistance to business continuity and platform operations whenever requested.
- Maintain a high level of conduct, ethical standards and values.
- Adhere to and enhance the firm's compliance with applicable laws, regulations and codes of conduct in all jurisdictions in which the Firm conducts business and which have an impact on its business.

Skills & Experience required:

- 10-12 years of experience designing and implementing software systems.
- Experience working on large-scale, distributed, low-latency software projects.
- Experience with architectural patterns for High Availability, Performance and Scale Out.
- Ability to evaluate and identify software solutions.
- Experience developing software utilizing various coding languages including C#, C++ and more
- Solid understanding of the software development life cycle.
- Strong communication and collaboration skills.
- Ability to communicate in English on a daily basis.

Skills & Experience required:

Good to have

- Experience with financial products.
- Experience working with distributed, multidisciplinary teams.
- Experience working with streaming "real time" messaging in a distributed enterprise.

Offer:

- Work in a startup-like environment that encourages ideas and creativity
- A team of experienced developers helping each other improve their skills
- Ability to choose the equipment you work with
- Standing desk and ergonomic chair
- Spacious and cozy office space in the heart of old Kraków
- Flexible working hours and the possibility to work remotely
- Competitive benefits package, including health care and gym pass (Multisport)
- Kitchen full of coffee, tea, snacks, and fresh fruit
- Salary in line with the market
- Co-working, mentoring and personal development
