We offer a rewarding and exciting professional experience and opportunity to develop your career in a highly competitive international environment.

IT Engineer (Authorizations & Access Management)

Location: remote, Warsaw (Poland)

Job Description:

As we are expanding our team and scope, we are looking for an IT enthusiast with experience in cloud technologies, that would help us enhance our Identity and Access Management and our Privileged Access Management contributing to improved Authorization management. As an IT engineer you will have the opportunity to build and enhance our IAM and PAM cloud solutions while working with multiple technologies in a fast-growing international environment.

Scope of Responsibilities:

- Design, implementation & integration, and support of cloud identity solutions.
- Provide input into architectural design of Access Control, User Entitlements, Application Credentials, User Access Policy Management, enhancing security related to IAM,PAM and RBAC.
- Constantly challenge and review workflows and processes linked to authorization and authentication to identify improvement opportunities
- Build and maintain documentation such as requirement/design documents, operational drawings, standard operating procedures, manuals reference architecture, etc
- Manage appropriate access to applications, systems, and data with advanced authentication. Oversee the spread of information with privileged access management,
- Managing and executing access lifecycle processes and controls as part of access request (vetting), fulfillment (provisioning),
- Enforcing access controls related to ID/account access and ensuring that request approval checks, completeness validation, and correctness checks are conducted,
- Monitor and identify authentication and authorization issues; formulate appropriate resolutions,
- Working with the Security Team to plan, coordinate, and implement security enhancements to safeguard service access, data repositories & other digital assets,
- Assist stakeholders in completing the team's access request forms,
- Assist with other organization security projects and tasks as required.

Skills & Experience required:

- 2+ years of experience in a similar role in a relevant software or internet service industry,
- Minimum Bachelor of Science degree in Computer Science, Computer Engineering, or a related technical field,
- Experience working with federated identity management infrastructure, including the configuration and management of SAML- and OAuth-based identity provider and service provider connections
- Experience with modern API protocols (REST/SCIM/SOAP/cURL).
- Working knowledge on identity management systems and cloud architecture,
- Good knowledge of tools and automation techniques for role managements in cloud services and environments,
- Knowledge of relevant business or compliance drivers that obviate the need for security tooling or processes,
- Experience using data analysis (such as from logs), monitoring, and automation to improve operational excellence, reduce operational labor, and improve the overall security posture
- Open to work in an international, multilingual environment,
- Proficient in English.
- Good written and verbal communication skills

Offer:

- challenge, opportunities to exchange skills within multinational team
- ability to work in an autonomous way and in an environment
  where your ideas are valued
- interesting trainings
- health care
- Multisport card
- French classes
- flexi-time and home-office
- competitive salary aligned with experience
- casual and very friendly environment
- possibility to work in other Client location
